SURGI LAB: Swiss innovation and smart manufacturing

SURGI LAB was created by experienced eyecare professionals who wanted to help ophthalmic surgeons to achieve better outcomes for their patients.

We use the latest technology to design and manufacture single-use surgical instruments. As a result, ophthalmologists can feel confident our single-use surgical instruments deliver value as well as reliability every time.

Based in St Gallen, within Switzerland's new Innovation Park East, and a member of the Swiss Medtech Association, we're an innovative company combining state-of-the-art design and production processes with a commitment to health, safety and superior craftsmanship.

What makes SURGI LAB different?

We believe it's our commitment to improved safety and optimal performance. Our products are designed with the belief that precision equals safety – and that safety is too important to ignore or compromise. Each one of our single-use products has been crafted to the highest standards to achieve a consistent and exceptional performance.

We want to make SURGI LAB the most trusted provider of precision surgical instruments in Europe, and ultimately the world.

As our range of ophthalmic instruments continues to expand, we are reimagining what the future of optical healthcare should look like.

What makes SURGINJECT VENO the optimal pre-assembled injector?

To achieve a successful intraocular lens (IOL) implantation during cataract surgery, it's critical to use a safe injection system that ensures predictable and repeatable IOL delivery for safety and optimal patient comfort.

SURGINJECT VENO is a pre-assembled injector with a high-end biocompatible coating that makes the injector easier to wield while delivering the lens with minimal friction. Each injector is equipped with a precise thin-wall cartridge that helps doctors to accomplish IOL implantations that require a smaller incision size.

- One-piece IOL design used for routine/daily procedures
- Optimized thin-wall cartridge design enables MICS
- Latest coating technology ensures smooth passage of IOL with minimal friction
- No risk of damage to IOL optic or haptics
- Repeatably safe, convenient, and reliable
